

The fishing and fishery products sector is a strategic sector on which the State relies to strengthen food security, sustainable development and support the national economy.

The indicators achieved during the recent period reflect the extent of the development achieved in light of the new strategy pursued by the State to increase production capacities and stimulate investments in :

- marine and freshwater aquaculture
- deep sea fishing.
- shipbuilding and repair
- In addition to improving the economic and social conditions of professionals.
- Exploit scientific research as a means of achieving objectives and responding to the demands of professionals.
- Develop processing industries.

Fishing sector indicators with numbers

The fishing and fishery production sector has more than 65,100 maritime registrants active in the field of fishing and aquaculture, distributed in 46 ports along the coastal strip.

Aquaculture Section

The Aquaculture section is experiencing great dynamism and has begun to contribute to the development of the national economy and the improvement of food security, since the sector counts the entry into production through 17 aquaculture farms with floating cages in sea distributed in 9 coastal wilayas, which contribute to supporting the national market with 8,000 tonnes.

The Ministry of Fisheries and Fisheries Production aims to increase production by 2024 to 24,000 tonnes.

Sea oyster farming is also experiencing remarkable development after having counted 25 projects in 12 coastal wilayas with a production capacity of 59 tonnes.

Aquaculture in agricultural irrigation basins is also experiencing an upward curve after the success of the experience of breeding and marketing red tilapia in several wilayas of the country, where investments have moved from the public sector through the complex " COSIDER AGRICO" to the private sector. Through a certain number of projects proposed in each of the following wilayas: Ain

Temouchent, Bordj Bou Arreridj, Chlef and Biskra, and the Ministry of Fisheries and Fisheries Production. Horizon of 2024, aims to implement all new projects to reach 5,000 tons.

Construction, repair and maintenance of fishing boats

- The fishing fleet has recently been strengthened with 161 new fishing boats. For the first time, three new deep-sea fishing boats with a length of 35 meters have been built. Currently, workshops are underway to build, maintain and repair fishing boats. Fishing boats, whose owners have benefited from real estate funds to help fishing boat owners, from workshops to develop their activities, by building a group of ships with an integration rate of more than 60 percent.

Development of deep sea fishing

- Algeria has regained its annual bluefin tuna fishing quota, estimated at 2,023 tonnes for this season, an increase of 368 tonnes. 32 vessels with the national emblem, including three locally manufactured vessels, participated in the fishing.

Processing industries

Algeria has 16 fishery products processing units with a total production capacity of more than 20 thousand tonnes per year.

Improve the economic and social conditions of professionals.

- In order to supervise and organize the profession, a legal basis has been established for the creation of cooperatives in the field of fishing and aquaculture, and wishes have been
- presented to create 475 cooperatives in all sections at the level of 47 wilayas, which will have a fundamental role in the development of activities in the sector.
- Scientific research is a means of achieving objectives and responding to the demands of professionals.
- The National Center for Research and Development of Fisheries and Aquaculture and the Laboratory for Control and Analysis of Fisheries and Aquaculture Products and Environmental Health, the Scientific Research Ship Grine Belkacem , scientific organizations that support the fishing and aquaculture sector through practical solutions. And precise

research and analyzes which greatly contribute to responding to the concerns of clients and professionals.
